Science Communications Internship
Start Date: 9 May 2016 (or as soon as possible thereafter)
Closing Date of Application: 22 April 2016

Description:
An exciting opportunity has arisen for a Science Communications Intern to join the Research and Monitoring team at The Toledo Institute for Development and Environment (TIDE). TIDE is one of the leading conservation organizations in the Mesoamerican region working to protect some of the most pristine coastal and marine ecosystems in Central America. TIDE works by building local capacity for conservation and fostering community participation in sustainable management of natural resources.

The Science Communications Intern will work under the supervision of the Science Director to support all activities of the Research and Monitoring Department at TIDE. This is an interdisciplinary position offering experience in a variety of professional fields, including research, conservation, resource management, stakeholder engagement, outreach and advocacy.

The successful candidate will have a diverse skillset and experience in applying research and engaging stakeholders to facilitate management of natural resources. S/he will be responsible for raising awareness of TIDE’s research and conservation activities including creating content for the website, articles for newsletters, and developing media outreach strategies. Minimal training will be provided and the successful candidate will need to be proactive and self-sufficient.
