Summer Lab Technicians (Project Carbon)

Syracuse University: The Fridley Lab at Syracuse University is seeking two motivated undergraduate students to participate in ‘Project Carbon’, a laboratory investigation of the energy and nutrient budgets of plant species in a long-term climate change experiment. Activities will depend in part on the interests of the students but will likely involve greenhouse plant propagation, laboratory gas exchange measurements, plant tissue analyses of energy and nutrient content, and soil microbial measurements. Students will be provided with a $5000 stipend for living expenses over the 12-wk duration starting May 15. Relevant experience and ecology- or plant biology-related coursework is desirable but not required. For information on eligibility and how to apply go to: https://sites.google.com/site/fridleylab/home/join-us
Applications will be accepted through April 1, 2017.
