Topic: This presentation will cover your project report. However, each group member will present only a portion of the project.

Length: The overall presentation should be roughly 25-30 minutes in length, with segments presented by individual group members lasting 5-10 minutes each.

Guidelines and Hints: The content of your presentation should be essentially the same as your project report. However, keep in mind that an oral presentation is quite different from a written report, and although the content may be the same, you need to approach an oral presentation differently. In general, you probably want to sacrifice some detail while stressing the "big picture" and the main points. Visuals are a very important part of effective presenting, and you should plan on using several clear, readable, and well organized PowerPoint slides to outline your topic and objectives, structure your presentation, highlight the main points, illustrate data analysis results, and to summarize your presentation at the end. The key to giving an effective presentation, once the content and organization are in place, is practice.

Dates: Presentations will be given in class on April 25 and 27. Your specific date will be assigned no later than April 20.

Grading: Presentations of individual students will be graded separately. Grades will be based on scoring the following areas:

- Style (voice quality and strength, eye contact, delivery, etc.)
- Visuals (photos, tables, graphs, maps, diagrams, etc.)
- Organization (outline, bullets, etc.)
- Content
