Some Considerations for Graduate Presentations

Your presentation should be prepared using power point. Where appropriate, use well constructed charts and tables to present your data.

Total length of the presentation should not exceed 15 minutes including time for questions from the class

Be sure to clearly state what you were testing (or in the case of a research proposal) plan to test.

Explain how the testing was (will be) conducted

Explain the results (expected results) and if the results differed from what you expected, offer your best speculation about why this difference might have occurred.

If you feel that handouts would be helpful to the class, both for their current understanding and for later study, you may prepare up to 2 pages of handouts. Provide the original to me not later than the day before class and I will run copies for the class.

Your presentation will be evaluated based on the following items:
  Completeness of presentation
  Adequacy of data collected
  Correctness of your interpretations
  Quality of power point visuals
  Quality of answers to questions from the class

If you have questions about your presentation, I will be happy to discuss it with you.
