

## Assistant Professor in Genomics at University of Alaska Anchorage

The Department of Biological Sciences at the University of Alaska Anchorage invites applicants for a tenure track position in Genomics. A PhD in biological sciences or closely related discipline and a strong record of research productivity are required. Postdoctoral or industry experience is required. Candidates are expected to demonstrate a strong commitment to undergraduate and graduate education, and teaching experience is preferred.

The successful applicant will contribute to research and teaching in the Department by developing extramurally funded research programs involving graduate and undergraduate students and teaching courses within our BS, BA, and MS degrees in Biological Sciences.

Candidates with expertise in genomics of humans, wildlife, plants or eukaryotic model organisms using next-generation sequencing technologies are especially encouraged to apply. Teaching responsibilities could include principles of genetics, human genome, and upper division and graduate electives specific to the candidate's area of expertise.
