Assistant Professor of Biology-Ecology Job at Regis University

This tenure-track Assistant Professor will have yearly teaching responsibilities of Introductory Biology, an undergraduate laboratory in biological data analysis using R, and a contribution to the M.S. in Environmental Biology program in the area of biostatistics and/or ecological statistical modeling. This position also will have rotating teaching responsibilities including an undergraduate ecology course, an interdisciplinary writing-intensive course in the Regis College Core Curriculum, and an M.S. in Environmental Biology course with a focus on M.S. project development. Regis College is primarily an undergraduate teaching institution whose faculty members are expected to advise students and participate in the academic governance of the department, college, and university. This position also will contribute to the M.S. in Environmental Biology program by participating in program meetings, coordinating with other faculty members teaching in the program, reviewing student non-thesis projects, and advising students. The successful candidate must include inquiry in any laboratories taught; participate in pedagogical and curricular development in the program, department, and college; and maintain active research that involves undergraduate students.

The position’s appointment will be as a tenure-track Assistant Professor in the Biology Department. The position’s academic expertise should be in ecology or a related discipline.

Position offered pending final administrative approval.
