Insect ecology research assistant

The agricultural insect ecology lab at Clemson University (carmenblubaugh.com) is currently recruiting a full-time summer research assistant for the 2019 field season ($12/hour, May-August, though employment has the potential to continue through the fall 2019). Research in the lab examines relationships between agricultural biodiversity and biological control of crop pests by quantifying costs and benefits of diversity in plant communities, insect communities, and soil microbial communities. Work will involve strenuous field labor (managing experiments at the research farm, weeding, collecting insects, etc.) as well as lab and greenhouse work. There will be opportunities for candidates to pursue independent research projects in the lab, and previous experience with farm work, as well as identification of insects and plants is beneficial. To apply, please submit a cv and a letter detailing academic interests and background in sustainable agriculture, biodiversity, and trophic ecology to cblubau@clemson.edu by Feb. 17.
